## **CARING FOR YOUR PLANTERS**

### **CERAMICS POTTERY:**

- Regular Glaze Finish:

Clean the piece regularly with a cloth. If it is not cleaned regularly, minerals contained in the soil may appear that are more difficult to clean. Use some white vinegar diluted in water. WD-40 oil is very good for cleaning this type of stains. Some types of soil and water may contain excess of minerals and may require cleaning more consistently (as every 2 weeks).

Planters should never have excess water; let it leave the water without obstructing the drain hole. Do not use stones or heavy objects inside the pot. Excess weight can break the piece.

- Stone Finish:

Clean the piece regularly with a simple paint brush or plastic brush. Don't use cloth. The hose jet cleans them very well. This is a very resistant finish and does not require care. You can apply some water based sealer if you want a less opaque appearance.
